

Fence Difficulty in GB and Irish Chases

One aspect of chase races that seems to be largely ignored is fence difficulty. I realised I hadn't seen much research on this so I decided it was worth investigating for my second article.

I settled on horses that Fell or Unseated Rider to measure difficulty. Adding Unseated Rider bumped up the sample size quite a bit and seemed logical because although it can be caused by a slip or jink it's usually the fence that causes the problem. There are various issues that mean this is by no means a perfect way of measuring fence difficulty. Some tracks have a greater proportion of races run over longer distances and therefore more fences to jump and some tracks that have more races for inexperienced horses. Some tracks have repositioned fences for safety reasons – for example Cheltenham Old Course 2nd last fence has been moved 3 times in the last 10 years.

I set up the Exporter to export the 7 fields below for all chases in GB and Ireland from January 1st 2013 to December 31st 2023:

The screenshot shows the 'Data Exporter' interface with several sections:

- Race Data:** Includes checkboxes for Race Date & Time, Course, Course Direction, Course Characteristics, Distance, Value, Distance in Yards, Race Type, Number of Runners, Class, New Class Number, Minimum Age, Maximum Age, Handicap Limit, Race Name, Time In Seconds, Going, Official Going, Classifications, Race Date, Race Time, Total SP %, CD Pace IV Leaders, CD Pace IV Prominent, CD Pace IV Held Up, LTO CD Pace IV Leaders, LTO CD Pace IV Prominent, and LTO CD Pace IV Held Up.
- Runner Data:** Includes checkboxes for Racecard Number, Draw, Draw Impact Value, Finishing Position, Horse Name, Horse Country, Distance To Next, Distance To Winner, Jockey, Jockey Claim, Trainer, Age (at time of Race), Weight Carried (pounds), Penalty Carried, Weight Rank, Days Since Last Run, Equipment, Horse Colour, Horse Sex, Horse Sex Abbrev, Horse Dam, Horse Sire, Form String, Pace String, Favorite Indicator, Industry Odds (SP), Industry Odds (SP) Decimal, Betfair Decimal SP, Betfair ESTIMATE Decimal, Comments In Running, Won (1=Won, 0=Lost), Place (1=Placed, 0=UnPlaced), PRC Average, PRC Last Run, PRC 2nd Last Run, PRC 3rd Last Run, Pace Abbreviation, Pace Rating, Pace Rating Rank, Official Rating, Official Rating Rank, Tissue Odds (textual eg. Evens, 6/1 et), Tissue Odds Decimal, Tissue Rating, Tissue Rating Rank, TIC+PFR, PFR, PFR Rank, Main Rating, Main Rating Rank, Main+Stats Rating, Main+Stats Rating Rank, Stats Rating, Stats Rating Rank, Trainer Stats Rating, Trainer Stats Rating Rank, Jockey Stats Rating, Jockey Stats Rating Rank, Trainer/Jockey Stats Rating, Trainer/Jockey Stats Rating Rank, Horse Stats Rating, Horse Stats Rating Rank, User Rating 1, User Rating 1 Rank, and User Rating 1 Decimal Odds.
- Calculated and Filtered Data:** Includes checkboxes for dyHA, dyLTO, dyAVG, dyAVG(x), dyMR, dyMR(x), dy2HA, VDW, HC, Finished Races SR, Runs Before, Won Before, Won SR Before, Won P/L Before, Plc Before, Plc SR Before, Plc Since, Won Since, Won SR Since, Won P/L Since, Plc Since, Plc SR Since, Class LTO (Same Code), New Class LTO (Same Code), Distance LTO (Same Code), Distance In Yards LTO (Same Code), Value LTO (Same Code), Pounds LTO (Same Code), Official Rating LTO (Same Code), FinPos LTO (Same Code), Course LTO (Same Code), Distance to Winner LTO (Same Code), SP Odds LTO (Numerical) (Same Code), SP Odds LTO (Decimal) (Same Code), Betfair SP Odds LTO (Numerical) (Same Code), Betfair SP Odds LTO (Decimal) (Same Code), DLSR(F), DLSR(O), FLAT TURF Runs Before, FLAT AW Runs Before, CHASE Runs Before, HURDLE Runs Before, NHF Runs Before, ALL FLAT Runs Before, ALL JUMPS Runs Before, FLAT TURF Wins Before, FLAT AW Wins Before, CHASE Wins Before, HURDLE Wins Before, NHF Wins Before, ALL FLAT Wins Before, ALL JUMPS Wins Before, History (CD, BF etc), Class LTO, New Class LTO, Distance LTO, Distance In Yards LTO, Value LTO, Pounds LTO, Official Rating LTO, FinPos LTO, Course LTO, Distance to Winner LTO, SP Odds LTO (Numerical), and SP Odds LTO (Decimal).
- Date Restrictions:** Shows Start Date (January 2013) and End Date (December 2023) with calendar views. Includes a Course dropdown set to 'ALL COURSES' and checkboxes for 'Tick for just UK Courses' and 'Tick for just IRE Courses'. Radio buttons for 'TURF', 'A/W', 'ALL', 'CHASE', 'HURDLES', and 'NHF' are visible, with 'CHASE' selected.
- Tick Selections:** Includes sections for 'Select FIRST 85 calculated fields', 'Select SECOND 85 calculated fields', 'Select THIRD 85 calculated fields', and 'Saved Export Ticks' (EXPORT 1, EXPORT 2, EXPORT 3, EXPORT 4, EXPORT 5).

A useful recent feature of the Exporter are the saved Export ticks in the right where if you have different fields required for different exports it will remember which ones you selected for future exports. The Race name field was included so I could differentiate between Aintree Mildmay and Aintree National.

The Horse Country field was included in case I decided to do some work which required looking back at previous runs. This would enable me to create a unique horse reference in case some horses shared the same name.

This gave me a file with 160693 runs in this format:

	A	B	C	D	E	F	G	H	I
	Course	Race	Race Date	Race Time	Position	Horse	Horse Country		
2	Catterick	Buy A 2013 Annual Badge Today Beg	01/01/2013	13:10	1	Rapidolyte De Ladalk	GB

8	Exeter	Royal Castle Hotel Beginners' Chas	01/01/2013	13:30	2	Theatrical Star	GB		

Position 247 indicates Unseated Rider and Position 250 indicates Fell.

The 5 races run over Grand National fences are:

- Fox Hunters' Chase
- Topham chase
- Grand National Chase
- Becher Handicap Chase
- Grand Sefton

A bit of work in Excel ends up with a new Course column with Aintree Mildmay and National, a Fell/UR flag and a Count column for Pivot tables

ite	Race Ti	Positio	Horse	Horse C	Fell/PU	Course	Count
01/01/2013	15:15	6	Lupita				1

A pivot table then gives the breakdown of Fell/UR runners by year in the format below.

A full breakdown for every track is available at the end of this article in Appendix 2

Example:

	Runs	Fell/UR	% Fell/UR
Ayr	2391	203	8.49
2013	192	20	10.42
2014	204	15	7.35
2015	225	33	14.67
2016	251	27	10.76
2017	248	16	6.45
2018	257	18	7.00
2019	232	20	8.62
2020	141	10	7.09
2021	200	15	7.50
2022	233	15	6.44
2023	208	14	6.73

Ayr is similar to quite a few tracks where the % of Fell/UR runners has reduced in recent years.

Other examples are Down Royal and Fakenham:

	Runs	Fell/UR	% Fell/UR
Down Royal	1724	139	8.06
2013	181	22	12.15
2014	159	17	10.69
2015	179	32	17.88
2016	163	14	8.59
2017	180	16	8.89
2018	145	7	4.83
2019	142	9	6.34
2020	129	1	0.78
2021	152	9	5.92
2022	147	8	5.44
2023	147	4	2.72
Fakenham	1779	224	12.59
2013	143	29	20.28
2014	162	35	21.60
2015	172	24	13.95
2016	182	30	16.48
2017	167	19	11.38
2018	159	18	11.32
2019	148	16	10.81
2020	135	11	8.15
2021	203	14	6.90
2022	158	14	8.86
2023	150	14	9.33

A good look at the list at the end of the article shows quite a bit of variation.

I needed a way of defining the fence difficulty at each track. One option was to do a rolling average but that would have given varying figures for each year by track. That would not have been ideal because it would have made the cut-off on January 1st each year when it should really be the start of each season.

After trying a few things, I just settled on taking the average for 2017 on. The purpose of this research was not to investigate each track individually but to find wider trends based on fence difficulty across a range of tracks.

% of Fell/UR in Chase Races by Track since 2017

		% Fell/UR
Aintree National		21.13
Leopardstown	IRE	12.91
Punchestown	IRE	11.07
Listowel	IRE	10.70
Sligo	IRE	10.69
Thurles	IRE	10.23
Naas	IRE	9.78
Killarney	IRE	9.56
Fakenham		9.46
Plumpton		9.35
Ludlow		9.10
Newcastle		8.58
Haydock		8.52
Fairyhouse	IRE	8.52
Limerick	IRE	8.40
Catterick		8.35
Galway	IRE	8.31
Tipperary	IRE	8.16
Wetherby		7.90
Tramore	IRE	7.86
Gowran Park	IRE	7.40
Cheltenham		7.31
Clonmel	IRE	7.23
Cork	IRE	7.21
Taunton		7.18
Ayr		7.11
Wincanton		6.95
Navan	IRE	6.92
Wexford	IRE	6.66
Towcester		6.58
Ascot		6.55
Chepstow		6.37
Downpatrick	IRE	6.31
Perth		6.31
Kempton		6.28
Sandown		6.22
Hereford		6.12
Newbury		6.05
Musselburgh		5.96
Kelso		5.94
Ffos Las		5.88
Lingfield		5.86

Hexham		5.86
Roscommon	IRE	5.69
Doncaster		5.53
Market Rasen		5.48
Exeter		5.42
Kilbeggan	IRE	5.39
Southwell		5.35
Bangor-On-Dee		5.31
Stratford		5.29
Sedgefield		5.21
Down Royal	IRE	5.18
Leicester		5.05
Huntingdon		5.01
Ballinrobe	IRE	4.94
Newton Abbot		4.68
Aintree Mildmay		4.58
Uttoxeter		4.53
Carlisle		4.24
Fontwell		3.96
Worcester		3.87
Warwick		3.81
Cartmel		3.40

As expected the Irish tracks dominate the top of the list which may well explain why the % of Irish-trained winners has been going up for quite a while. The % number of Fell/UR at Irish tracks has declined since 2013 but not at the same rate as GB tracks. **See the graph at the end of this article (Appendix 1).**

Instead of repeatedly selecting groups of tracks in System Builder we can import the track difficulty % since January 1st 2017 as one of the ratings values:

- C:\Program Files\Proform\user ratingimporters
- C:\Proform\user rating importers

There are 4 user rating importers, one for each user rating. Click on the link to download the relevant importer

- [User Rating -1- Importer.exe](#)
- [User Rating -2- Importer.exe](#)
- [User Rating -3- Importer.exe](#)
- [User Rating -4- Importer.exe](#)

Each file reads a comma separated file which should be ordered as follows:

1. Course
2. Date
3. Time
4. Horse
5. Rating

For example

```
Bath,20/05/2011,14:10,Toffee Tart,184
Bath,20/05/2011,14:10,Vieira da Silva,106
Bath,20/05/2011,14:10,Ida Inkley,98
Bath,20/05/2011,14:10,Bella Ponte,89

Musselburgh	01/01/2017	13:05	Apachee Prince	5.96
Musselburgh	01/01/2017	13:05	Misfits	5.96
Musselburgh	01/01/2017	13:05	Toreador	5.96
			Valentino's	
Musselburgh	01/01/2017	13:05	Choice	5.96

The track % Fell/UR was then imported into the User Rating 4 field using a csv file as per the instructions. This field can accommodate decimal places, unlike User Rating 1, 2 and 3 fields. If you already have a rating in UR4 you can simply multiply these figures by 100 and import into UR1, 2 or 3 and just remember that if you want to look at tracks with for example a % Faller/UR rate of less than 6% you must enter <600.

Once imported this meant every horse with a chase run since January 1st 2017 to 31st December 2023 had a rating for each run representing the track difficulty which can now be analysed in System Builder.

Proform Members can access this file from the members only Telegram group.

You can import this and do your own analysis. If you wish to change the ratings remember Aintree Mildmay and National Course races must be identified by the current values because the track name is the same.

How fence difficulty can affect profitability:

I didn't spend time finding ideal cut-off points to prove/disprove anything. The 6.0% Fell/UR cut-off was simply chosen because it's almost half-way down the list of GB tracks in terms of difficulty. Class 1 and 2 races were excluded because top class horses/races often don't conform to the same patterns as lower class races.

I set up System Builder like this:

Course tab: Only UK courses selected

LTO Horse tab: LTO Pace Abbrev only 'H' ticked, LTO Placed Yes/No '1' entered.

Date tab: '2018 to 2023' ticked.

Horse tab: in DSLR (days since last run) '<366' entered, SP (Starting Price) Rank '<4' entered.

LTO Race tab: LTO Race Types only 'Chase' ticked.

Race tab: In 'Race Types' only 'Chase' ticked, in 'Race Classes' only '3,4,5,6,7' ticked, in 'Distance' I entered '<4800' and 'Number of Runners' I entered '>3'.

Note I chose 2018 on instead of 2017 on because if I wanted to look at a horse's previous run within the past year I would still be using percentages from the overall sample being used. If I looked at early 2017 then I would probably be looking at runs from 2016 and 2016 data is not part of the figures.

Then in **Presentation Ratings tab** I ticked 'by User Rating 4 value' to be able to see the results in track difficulty order.

So we have class 3 and below races where the horse ran in a chase last run in the previous 365 days, is in the top 3 in the betting, placed lto after being held up and is running in a race of more than 3 runners that is **shorter than 2m 6f**.

If in the **Ratings (Speed and User) tab** I enter '<6.0' in the User Ratings by Value/User Rating 4 field I get the results for those tracks with a Fell/PUp rate of less than 6.0%. To find out which track is indicated you'll have to match the User rating 4 with the % of Fell/UR runners in the table listed earlier.

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to: 30/03/2024)													
User Rating 4	Runners	Winners	Win S/R	IV	PRB	PRB*2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair

The bottom line is this:

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to:)													
Runners	Winners	Win S/R	IV	PRB	PRB*2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair	
349	89	25.50	1.90	61.47	49.62	8.57	80.43	1.11	1.19	46.42	33.47	9.59	

Nothing too exciting but when compared to the previous example it's looking like the market might not be taking into account fence difficulty with races of 2m 6f or less where hold-up horses with a fair run LTO are concerned.

Now let's flip it round and look at longer distance races:

So we have class 3 and below races where the horse ran in a chase last run in the previous 365 days, is in the top 3 in the betting, placed lto after being held up and is running in a race of more than 3 runners that is **2m 6f or further**. We're only changing the distance to **>4800** yards in the **Race tab**.

Tracks with a 'difficulty' of **less than 6.0%** (>6.0' in the User Ratings by Value/User Rating 4 field):

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to: 30/03/2024)

With a bottom line of:

Runners	Winners	Win S/R	IV	PRB	PRB^2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair
300	48	16.00	1.35	55.98	44.59	-17.19	65.19	0.74	5.79	41.00	-84.73	-28.24

A hold-up runner in the first 3 in the betting having placed lto seems to have more chance of being a value bet at longer distances on a track with easy fences or at shorter distances on a track with more difficult fences. This could well be because front/prominent runners need a test in order to be disadvantaged. The easier the fences the further they need to run to be inconvenienced?

If horses held up last time out at longer distances at tracks with more difficult fences aren't generally value bets then where exactly does the value tend to lie? I had a look at prominent/front runners lto and that didn't really give me anything totally convincing but feel free to load in the file and have a look for yourselves.

I used the settings below to find that with difficult fences and longer distances the value seems to generally lie with hold-up horses lto that did NOT place and are not in the first 3 in the betting:

Course tab: Only UK courses selected

LTO Horse tab: LTO Pace Abbrev only 'H' ticked, LTO Placed Yes/No '0' entered.

Date tab: '2018 to 2023' ticked.

Horse tab: in DSLR (days since last run) '<366' entered, SP (Starting Price) Rank '>3' entered.

LTO Race tab: LTO Race Types only 'Chase' ticked.

Race tab: In 'Race Types' only 'Chase' ticked, in 'Race Classes' only '3,4,5,6,7' ticked, in 'Distance' entered '>4800' and 'Number of Runners' '>3'.

Ratings (Speed and User) tab/User Rating 4 value '>6.0'

The bottom line is this:

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to:													
Runners	Winners	Win S/R	IV	PRB	PRB^2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair	
1757	133	7.57	0.63	38.57	27.31	22.86	110.14	1.21	5.06	47.35	411.55	23.42	

Not too shabby. The Betfair P+L is inflated by a winner at 200.0 but the A/E and the Chi score are interesting.

And the same setting above except for **Ratings (Speed and User) tab**/User Rating 4 value '<6.0' (less difficult fences):

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to:													
Runners	Winners	Win S/R	IV	PRB	PRB^2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair	
2619	159	6.07	0.51	37.70	25.90	-1.57	160.57	0.99	0.02	43.83	70.67	2.70	

A totally unremarkable return suggesting fence difficulty is affecting market efficiency.

If we go back to the more difficult fences and look at the **fence difficulty for the horses' previous run** we are now looking back at ratings for January 1st 2017 onwards:

Back to **Ratings (Speed and User) tab**/User Rating 4 value '>6.0'

Plus:

The screenshot shows two sections: "Users Ratings by Value" and "Last Time Out Users Ratings by Value". In the "Last Time Out Users Ratings by Value" section, the bar for "User Rating 4" is highlighted in yellow and circled in red. To the right of this section, there is a vertical list of "Rep" labels. Handwritten red text ">6.0 or <6.0" is written next to the list, with an arrow pointing to the circled bar.

Then for difficult fences lto of >6.0:

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to: 3													
Runners	Winners	Win S/R	IV	PRB	PRB^2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair	b
874	67	7.67	0.66	38.57	27.71	11.76	55.24	1.21	2.67	47.25	275.87	31.56	-

And for less difficult fences lto (<6.0):

System Results (BOG ON) Betfair Price Used : Betfair SP (Prices up-to-date to: 3													
Runners	Winners	Win S/R	IV	PRB	PRB^2	WAX	EX Wins	A/E	Chi Scr	50%SR	P/L Betfair	ROI Betfair	b
883	66	7.47	0.66	38.57	26.92	11.10	54.90	1.20	2.39	47.45	133.80	15.15	-

Doesn't seem to matter – almost identical A/E. And distance of previous race doesn't seem to matter too much either if you look at <4800 yards and >4800 yards in the LTO Race tab.

This seems to suggest longer distance races with more difficult fences make it harder for horses with better form LTO to perform to market expectations and we have more outsiders winning. Logically we will be seeing more mistakes because of the number of difficult fences. Even if the extra fences are jumped cleanly the extra energy used in clearing them compared to easy fences must make a difference.

All this is just a start. I'm going to have a good dig around in my own database and see what extra I can find. There'll be other angles to be found, particularly with those long distance races over difficult fences. It'll not all be about run style lto. Try selecting only novice handicap chases and see what happens with runners that haven't really done much yet – not top 2 in the weights or not in the top 3 in the betting for example. Then have a look at the difference between easier fences and harder fences. You will find that outsiders win a lot more at easier tracks. Is the main reason for this because they don't have to run better than expected AND worry about jumping tricky fences? I haven't had a good look at Ireland yet but early research shows it doesn't behave the same as GB tracks but that's often the case.

I would caution against building a system based on fence difficulty involving a range of tracks and then eliminating the tracks in that range that make a loss (or a profit if building a lay system) unless you have a very good reason to do so. When any sample is broken down you will get elements that don't appear to be desirable but this is often simply variance. If the underlying principle is sound the worse performing tracks should improve and the best performing tracks would decline as things regress to the mean.

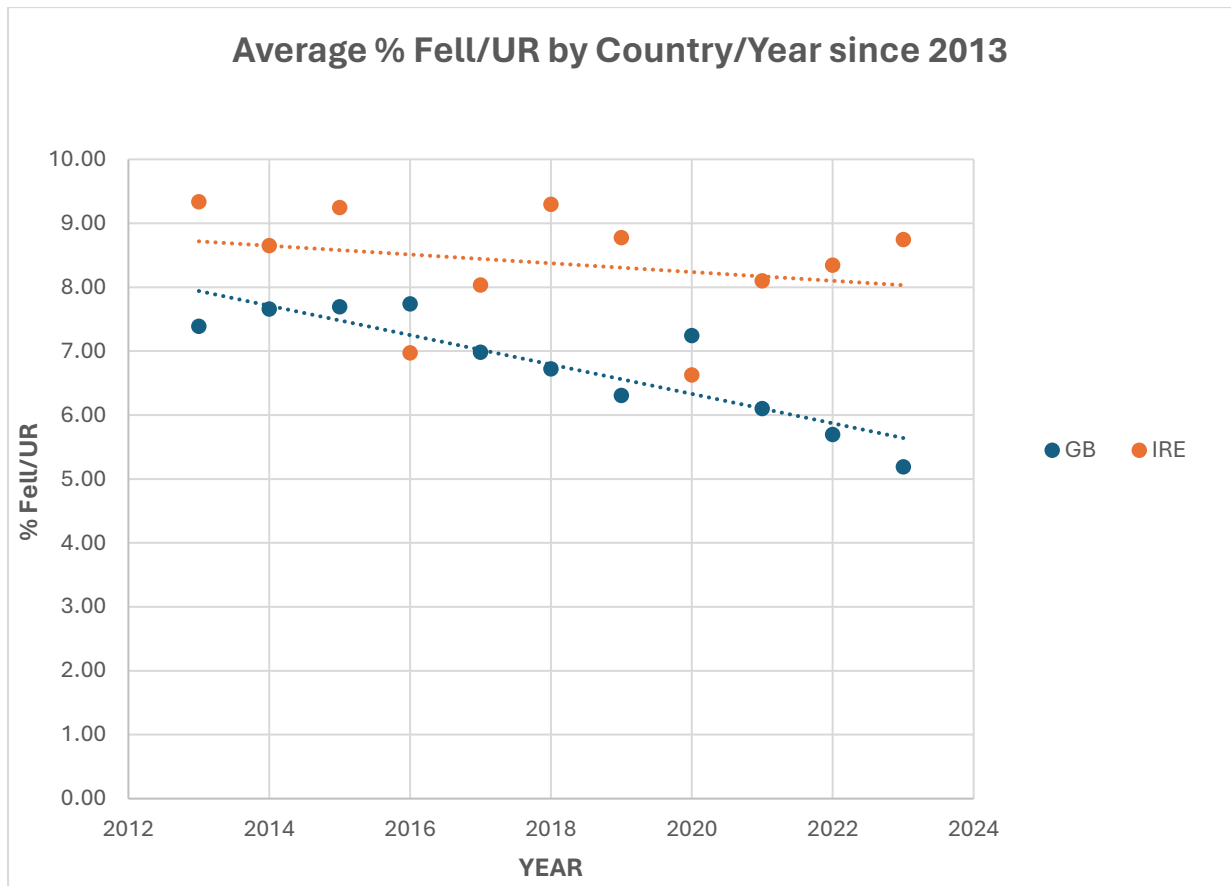

By Richard Slater

Very interested in finding angles in horse racing since the late 90s. I live in Yorkshire with my remarkably tolerant wife and 11 year-old twins. I've worked mainly in the sports betting industry since 2004, although unfortunately I don't deal with horse racing at the moment. Still developing logistic regression models which are designed to spot wrongly-priced horses and future market moves and I'll be working hard on finding even better ways of modelling this in 2024.

Appendix 1

Summary of % of Fell/UR at all Irish tracks compared with GB tracks since 2013:

The graph below clearly shows that GB tracks have reduced in difficulty a lot more since 2013 compared to Irish tracks. Does this explain the dominance of Irish horses at Cheltenham?

Appendix 2

Fell/Unseated Rider by Track and Year since 2013:

	Runs	Fel/UR	Fel/UR %
Aintree			
Mildmay	1652	85	5.15
